In the process of outsourcing emphetaion supports you with technical and organizational services.

SAP Outsourcing is an alternative for companies and organizations, who do not want to operate their SAP R/3 application by themselves. The cost- and time intensive acquiring of special knowledge for the operation of a SAP system is no longer necessary. The own IT organization will be free from daily duties and may focus on strategic tasks. Moreover this gives you an assured planning basis: Floating and hardly predictable costs will be substituted by calculable costs.

The service concept is tailored for you and consists of:

- the technical operation of your SAP system (SAP Hosting)
- support for your SAP application (modules):
  - adapting to changes in Law
  - adapting to organizational changes of your company
